## Don't Forget

Winterize your sprinkler system before the freezing weather. Various components within your system can freeze and break during sustained freezing spells if the lines are full of water. Normally this

isn't a problem until mid to late December. We may have some frost before then but that is unlikely to hurt your system.

**You can call us for advice or to provide this service.**

**Need help?**

Call Lynn for instructions or for us to take care of this for you.
