

Spring 2023

The Olympic

NEWS

Hoppin' into

**SPRING 2023!**

And we are jumping in with both feet!

- Spring colors
- Sunshine
- Blooming flowers
- Longer days

**It's time to get your Sprinkler System up and running!**

Depending on your type of sprinkler system and the components involved, your start-up process may require different steps – but the typical steps of a sprinkler start-up are:

- **Checking Your System Controllers:** It's important to clean away debris, check for repairs and replace your controller batteries, if necessary.
- **Checking Sprinkler Heads and Nozzles:** Clean up dirt, check for clogs, clear away debris and check for damage to your nozzles and sprinkler heads before start-up.
- **Inspecting Valves and Pipes:** Look for leaks or signs of damage in your above-ground hardware before opening up your valves. You should turn on your system slowly to introduce water without causing pressure surges.
- **Setting Timers:** Program your system's timers to ensure your watering occurs on a set schedule.

**If you are not already signed up for an annual Spring Start-Up, please give us a call, email, or send a [Request for Service](#). We are happy to help in whatever way we can!**

## Backflow Testing – What is it?

The majority of backflow assemblies include a check valve, a set of springs, and occasionally a relief valve. Each of these mechanical internal components must be tested annually and maintained, if necessary. During a backflow test, the assembly is pressurized and then each part is isolated to ensure it is operating at an acceptable level. The check valves must hold a minimum pressure to pass the inspection, and the relief valves must open before a certain pressure differential is reached. Repairs and possible replacement must be performed if minimum standards are not met.

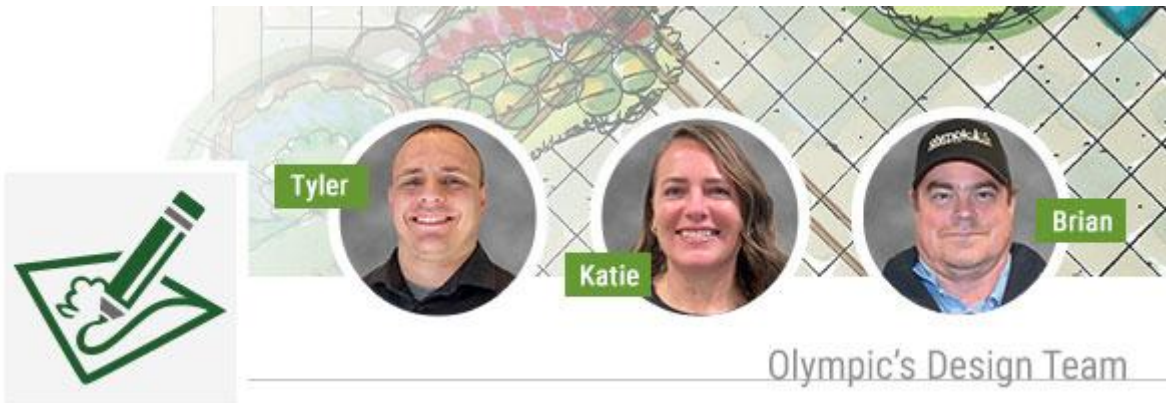

### Is testing required?

Yes, state regulations require all backflow prevention devices to be tested annually.

**Have you been contacted by your water company or city and need a backflow test? Please give us a call, email or send a Request for Service.**
